

# YUCHEN ZHANG

302-553-4490 | zyc1108@outlook.com | yczhang.design

## SUMMARY

Designer and developer specializing in AR/XR experiences and AI-integrated products. Pursuing an M.F.A. in Interactive Design at SCAD, with a B.S. in Computer Science. Designs and builds immersive, human-centered systems — from Quest 3 training simulations to AI-assisted mobile apps — bridging the gap between emerging technology and real-world usability.

## EDUCATION

**Savannah College of Art and Design (SCAD) — M.F.A., Interactive Design** Expected Dec 2026

*Thesis: Human-AI Collaboration in UI/UX Design Ideation — investigating how AI functions as Inspirator, Critic, and Co-creator in design workflows*

**University of Delaware — B.S., Computer Science** May 2023

## SKILLS

**Design Tools:** Figma, FigJam, Photoshop, Miro

**UX Methods:** User Interviews, Usability Testing, Heuristic Evaluation, Affinity Mapping, Journey Mapping, Information Architecture, Wireframing

**Project Management:** Jira

**AI & Prototyping:** Vibe Coding, Figma MCP, Pencil, Google Stitch

**XR:** XR Interaction Design, XR UI Design

## SELECTED PROJECTS

### Assembly Line Y — AI-Assisted Quest 3 VR Training Simulation

Developed Quest 3 VR training simulation using Unity, integrating Claude API for real-time AI voice guidance (ARIA assistant)

Designed multimodal XR workflow combining grab, poke, press, scanning, and voice interactions for Tesla Model Y assembly training

Built state-layer progress tracking system with AI-driven contextual guidance and performance feedback

### Nest Thermostat — Intelligent Interaction Redesign

Improved System Usability Scale (SUS) score by 35 points (47.5 → 82.5) through two rounds of usability testing

Reduced cognitive load by 60% by replacing dual-threshold HVAC logic with single-target temperature input

Designed cross-device unified mental model (hardware + mobile) with event-based scheduling system

### DoseCare — AI-Enhanced Mobile Health App for Medication Management

Conducted 9 interviews with adults 65+, synthesizing 129 research notes; reframed problem from scheduling to confidence

Achieved 100% task completion rate on reminder confirmation flow through usability testing

Designed AI-assisted barcode-first onboarding to eliminate manual prescription entry friction

### Agrox — AI-Powered Pest Management for Organic Farms

Conducted field research at 5 organic farms; evaluated 6 technical concepts against 4 criteria including AI feasibility

Designed AI visual pest recognition system and heatmap dashboard optimized for low-connectivity field environments

Created autonomous robot interface combining computer vision, vacuum-based pest removal, and steam sterilization control
